

The topic of electric vehicles is one, which has gained momentum. Clients are requesting and local authorities are stipulating, the installation of Electric Vehicle chargers on new construction projects.

Specifying Electric Vehicle Charging

Challenges & Opportunities

Eninserv have the expertise and experience to specify the charging requirements for your projects. We understand all aspects of EV technology as well as user requirements. We also understand the energy considerations, specifically the impact of EV charging on the Maximum Import Capacity of sites. Eninserv can assist in the specification of energy storage solutions connecting renewable energy sources to electric vehicles.

Engineering Services

ENINSERV Ltd.

Company Registration No. : 593131
Registered Office:
1 Glenbrae Court, Shankill, Co. Dublin.

EV charging, if specified incorrectly has potential to be the “can of worms” that you wished, had never been opened. However done right, it can be a positive experience for the owner or landlord of a new build. Unlike many appliances, there is a lot to consider when specifying the most suitable EV charging equipment. Planning regulations do not specify an exact fit; furthermore the client is not always clear about exactly what they want. Eninserv will get it right!

Specification writing

Eninserv Ltd., are ideally positioned to compile Electric Vehicle charging specifications for your projects. We understand the many types of use cases and will design the solution, which enables return on investment and recovery of energy costs.

Whether, residential, office, retail or mixed use, we address the needs of the client.

We get it right!

What we can offer!

Some of the questions:

- What type of Premises is being developed?
- Who will use the charge points?
- How is energy paid for?
- Who is authorised to use the charge points?
- Are there multiple tenants?
- Can any vehicle use the equipment installed?
- What happens when more points are required?

Training Services

With the right training your team can specify charging solutions for future projects. Eninserv Ltd., will present attendees with the tools to assemble sustainable EV charging designs.

Course topics include:

- Understanding EVSE's
- What can a vehicle accept?
- Charge Point Management
- What does the driver want?
- Use case building
- Electrical considerations
- Cost recovery
